

## Submetering Industry Leader H2O Degree Announces New Website Launch

*The new website features a streamlined, user friendly design, improved functionality and expanded technical and engineering resources for the company's submetering and utility management products.*

Bensalem, PA— December 12, 2019 — [H2O Degree](http://www.h2odegree.com), manufacturer of two-way wireless submetering systems for tenant billing, leak detection, utility conservation, and building automation system integration, announces the launch of their redesigned website. The new website features a streamlined design and improved functionality while providing easy access to essential information to help property managers implement utility management, water leak detection and energy conservation programs in multi-tenant facilities.

H2O Degree's new website features a variety of application information including success stories detailing how businesses like theirs have utilized submetering, water leak detection and thermostat control systems to increase tenant satisfaction while positively impacting their financial bottom line.

The new site features extensive sales and technical information on H2O Degree's water, gas, electric, and BTU meters, green thermostats and LoRaWAN compatible products. Engineers, contractors, distributors and meter reading service companies will be able to easily get the proper specification and technical data to select the right products for their projects. In addition, existing clients can access the H2O Degree web portal to view and analyze their building utility consumption and leak detection reports.

Customers can easily locate the contact information from the interactive map of H2O Degree's extensive sales representative network. In addition, property owners can see a list of H2O Degree's meter reading service providers or RBC partners that support H2O Degree products nationwide for tenant billing.

"The team at H2O Degree is excited to announce the new H2O Degree website to new and existing clients," said Don Millstein, President of H2O Degree. "This website redesign provides not only expanded technical details on H2O Degree products, but also provides the application and pre-sale information to help potential customers understand the benefits of implementing submetering, water leak detection and thermostat control solutions in their facility."

The new website will be updated regularly with industry news, events, product launches application information and case study data. Visitors are encouraged to visit the website often to see the latest news on submetering and utility management solutions from H2O Degree.

### About H2O Degree

*H2O Degree manufactures a broad line of wireless, radio-based submetering and leak detection systems that measure individual apartment or condo use of water, domestic hot water energy, boiler and chiller energy, electricity, gas and BTUs. The company also offers Green Thermostats, which track energy use and apartment temperature while allowing tenants and property owners to set temperature set-points and schedules, adjust set-back temperatures when tenants are away or asleep and report HVAC maintenance issues.
