

Water Leak Alarming

Instantaneous Leak Alarming

The instantaneous leak alarming feature generates a instantaneous email to the appropriate pre-defined parties when a severe leak occurs based on the following criteria:

- High Gallon Alarm
 - Criteria - More than X gallons per hour for N hours
- Constant Flow Alarm
 - Criteria - 60 minutes of flow in an hour

Description of Data Available from H2O Degree Water Meters

The H2O Degree water meter computes and saves a number of registers:

- Gallons (cumulative gallons that have flowed through the water meter.)
- Number of events (cumulative number of times flow started and stopped (events) that have occurred.)
- Number of minutes of flow (cumulative time that water has flowed through the water meter.)
- Number of modified therms of hot water energy in the water (cumulative.)
- Temperature of the water.
