

The H2O Degree suite of reporting solutions provide multi-family facilities with the data they need to effectively manage, conserve and reduce utility costs. H2O Degree leak detection reports provide building owners and managers with the data needed to identify leaks in a building's water system.

Leak Detection & Toilet Reports

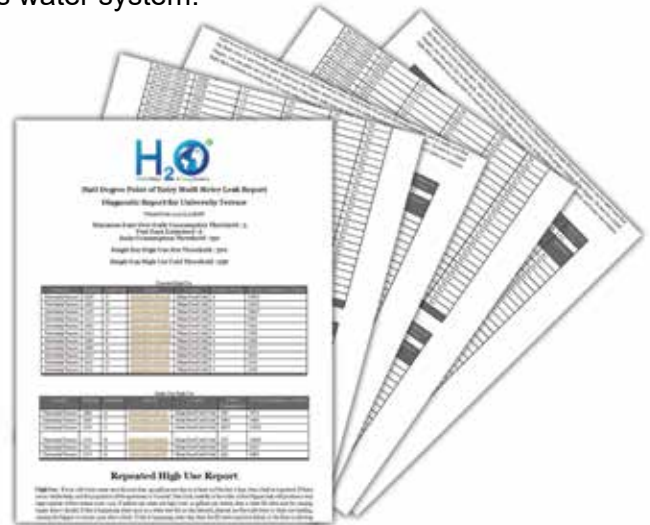

The daily leak report allows you to keep your finger on the pulse of your property ensuring that your team reacts quickly to leaks. Leak reports can be sorted by:

- Serial number
- Building
- Point-Of-Use (toilet, shower, etc.)
- Property
- Apartment
- Leak size

H2O Degree issues daily leak reports via e-mail through it's automated system. The customer can assign up to 10 different e-mail recipients.

Additional reports can be accessed via the Internet from the H2O Degree password-protected secure server and can be utilized to analyze your building's usage in near real-time.

The H2O Degree server has a number of different leak reports. Each leak report is designed to find leaks for a specific type of water meter, plumbing fixture and apartment configuration. Some of the leak reports are designed for only H2O Degree water meters, other leak reports work with any standard pulse water meter.

Toilet Diagnostic Report

This report is used to find leaks using the data from a H2O Degree water meter installed on a toilet.

Single-Day Point-Of-Use Diagnostic Report

This leak report is used to find leaks using the data from a H2O Degree water meter installed on any Point-Of-Use plumbing fixture.

Dual Point-Of-Entry Water Meter Leak Report

This leak report is used to find leaks when there are two points of water entry in one apartment, and two H2O Degree water meters have been installed, one on each of the hot water and cold water supplies.

Dual Point-Of-Entry Water Meter Leak Report

This leak report is used to find leaks when there is one point of entry in one apartment and one H2O Degree water meter has been installed on the cold water supply.

Generic Water Meter with Pulse Output

This leak report is used to find high water usage leaks on any generic pulse water meter.

Generic Water Meter with Pulse Output Hourly Leak Report

This leak report is used to find water leaks based on a preset usage threshold every hour for one day on any generic pulse water meter. For this leak report to be effective, the pulse output from the water meter should be one pulse per gallon.
